BWXT Hosting Public Information Event on Proposed Fuel Fabrication Facility

(LYNCHBURG, Va. – Sept. 25, 2025) – BWXT will host a public information event on Tuesday, Sept. 30 beginning at 5:30 p.m. at the CAM-PLEX facility in Gillette, Wyoming. BWXT is proposing to construct a state-of-the-art TRISO fuel fabrication facility in Gillette. The event is designed to provide an overview of the project and introduce BWXT to the community. Members of the BWXT team will be present to answer questions about the project and the company. All who are interested are invited to attend.

Details

Date: Tuesday, Sept. 30

Location: CAM-PLEX Heritage Center Theater, 1635 Reata Drive Gillette, WY 82718

Time: Doors open at 5:30 p.m. (Pizza, cookies, water, soda, coffee will be provided)

Agenda:

5:30 p.m. Doors open/Food provided – Galleria Lobby

6:00 p.m. BWXT Overview Presentation – Heritage Center Theater

6:30 p.m. Poster Session/Q&A – Gallery

8:00 p.m. Event ends.

BWXT has launched a Facebook Event page to provide information and updates about the event. The page can be accessed [here](#).

BACKGROUND

Nuclear energy, alongside other dispatchable energy resources such as coal and natural gas, creates the basis for a reliable electricity grid that can deliver when it's needed, 24/7/365.

Electricity load projections suggest significant growth in demand driven by the expansion of data centers and AI, re-shoring of manufacturing and electrification activities. All of these factors support increased use of nuclear energy and the need for nuclear fuel from BWXT.

BWXT Advanced Fuels is utilizing our 20+ years of experience in TRISO fuel manufacturing to meet the expected future market demand through this fuel fabrication facility

BWXT traces its history back more than 165 years with the invention of the water tube boiler. Our nuclear experience spans more than 70 years.

BWXT is the sole manufacturer of naval nuclear reactors for U.S. submarines and aircraft carriers, as well as the nuclear fuel that propels them. BWXT reactors power the Navy's Ohio, Virginia, Seawolf and Los Angeles class submarines, as well as the Nimitz and Ford class aircraft carriers. BWXT reactors will be used to power Columbia-class submarines.
