In 2015, the Wyoming State Legislature passed a bill giving the option to the Wyoming Department of Transportation to set certain state highway speeds other than the interstates, to 70 mph after a traffic and engineering study had been completed. Of the total 6,400 miles, WYDOT then identified 1,500 miles that could be moved to 70 mph, and identified 812 miles that would need improvements before WYDOT could move them to 70 mph and about 661 that upon initial screening, wouldn't be appropriate for higher limit without additional advisory signage.

This year, 2016, the Wyoming State Legislature raised the 65 mph statutory speed limit on rural, non interstate highways to 70 mph; expediting the process and setting all two-lane paved state highways to 70 mph unless WYDOT identified safety risks on the road. For highways that have been signed at 65 mph, Wyoming's new state law sets the speed limit at 70 mph as soon as new speed limit signs are installed.

What is a statutory speed limit?

A statutory speed limit is a speed limit established by legislative action that typically is applicable for a particular class of highways with specific design, function, jurisdiction and location. Basically, all highways that meet this criteria are subject to enforcement of the statutory speed, unless otherwise posted. This also means WYDOT cannot arbitrarily lower a speed limit.

70 MPH SPEED LIMIT INCREASE

The Wyoming State Legislature in this past session (2016) raised the 65 mph statutory speed limit on rural, non interstate highways to 70 mph. This set all two-lane paved state highways to 70 mph unless WYDOT identified safety risks associated with the road. For highways that were signed at 65 mph Wyoming's new state law set the speed limit at 70 mph.

WYDOT installed new speed limit signs in April and May in northeast Wyoming implementing the new 70 mph speed limit.

693 miles have been moved to 70 mph in the Northeast Corner of Wyoming.

What is a statutory speed limit?
A statutory speed limit is a speed limit established by legislative action that typically is applicable for a particular class of highways with specific design, function, jurisdiction and location. Basically, all highways that meet this criteria are subject to enforcement of the statutory speed, unless otherwise posted. This also means WYDOT cannot arbitrarily lower a speed limit.

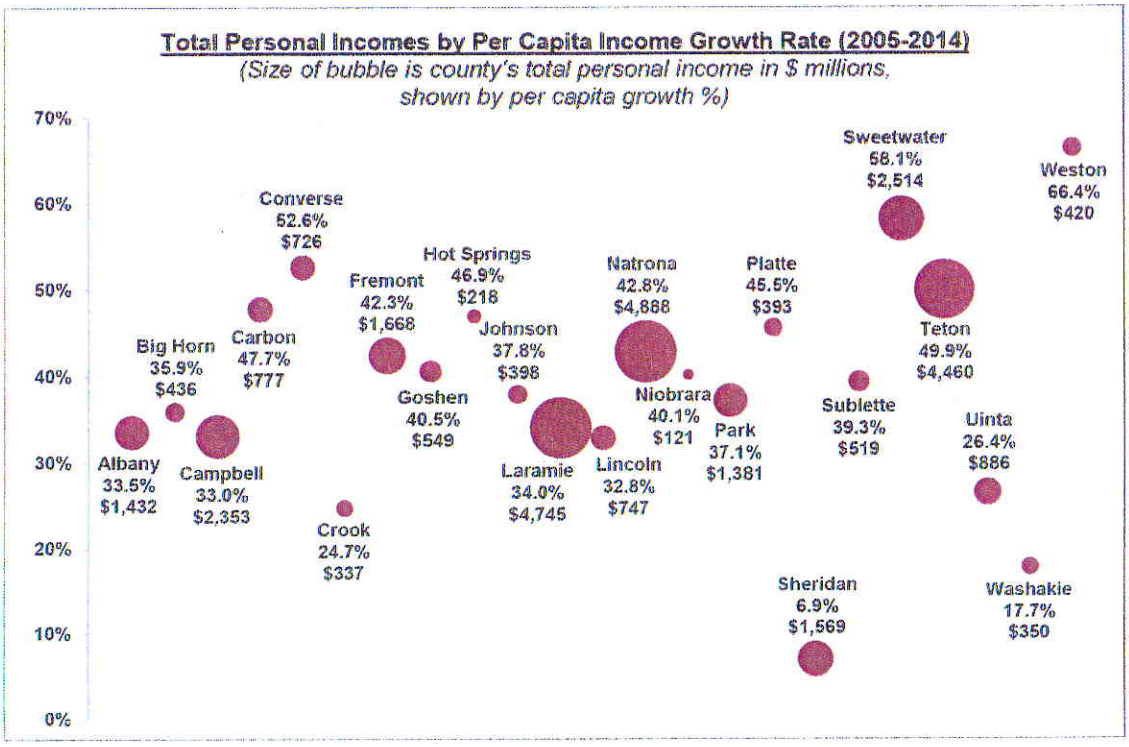
Per Capita Income and Total Personal Income

There are many ways to measure income. Per capita income (PCI) is a frequently used measure of income, and it is helpful to consider PCI changes over a long period of time, as it gives a general idea of the overall health of the economy. The PCI of every county in the nation is estimated each year by the U.S. Department of Commerce Bureau of Economic Analysis (BEA). Basically, the BEA estimates every kind of income, and then divides the total personal income in each county by its population (as determined by the U.S. Census Bureau) to calculate PCI. The most recent PCI data that is available is for 2014.



Calculation of PCI starts with its three main components: Earnings, Investments, and Transfer Receipts. Transfer Receipts are payments to people for which no current services are performed, including Retirement funds, Assistance from the government (e.g., food stamps), and Unemployment insurance compensation.

From 2005 to 2014, national PCI grew 28.3% (to $46,049) and Wyoming's PCI grew 39.4% (to $54,484). Within the state, Weston County (66.4%), Sweetwater County (58.1%), and Converse County (52.6%) experienced the most PCI growth, as shown on the chart above. Wyoming's PCI grew $15,420 from 2005 to 2014, rising to $52,826.

Total personal income in Wyoming grew to $31.9 billion in 2014, growing 58.3% since 2005. The five counties in Wyoming with the largest total personal income together represent 59.5% of Wyoming's total personal income (Natrona = $4.9 billion; Laramie = $4.7 billion; Teton = $4.5 billion; Sweetwater = $2.5 billion; and Campbell = $2.4 billion).

For the three components of personal income, from 2005 to 2014, Sweetwater County led growth in total Earnings (87.5%), Sublette County led total Investment income growth (90.6%), and Teton County led total Transfer Receipts growth (94.4%). Within the Transfer Receipts component, Teton County had the fastest growth rate for Retirement (93.2%), and for Assistance (131.9%), and Sublette County led Unemployment Insurance compensation growth (402.6%).

In terms of actual dollars for personal income growth, Natrona County led the state in growth of Earnings ($1.2 billion), Teton County led Investments ($1.5 billion), and Laramie County generated the most growth of Transfer Receipts ($298 million). For the components of Transfer Receipts, Laramie County grew the most in Retirement ($275 million) and Assistance ($20 million), while Natrona County saw the most growth of Unemployment insurance compensation ($4 million).
