RE: Coal Bed Methane Water Handling

Dear Mr. Barber:

The City of Gillette has retained Morrison-Maierle, Inc. to study options for an additional long-term drinking water supply for the City. One alternative that has been identified during this study is to use the water that is pumped off coal bed methane (CBM) wells as a drinking water supply. Given the way CBM operations work, this alternative requires some coordination with CBM operators.

Accordingly, we are holding a meeting Monday, May 21 at 3:00 P.M. in the Second Floor Conference Room, Gillette City Hall, to discuss the feasibility of this approach with the CBM operators in the Powder River Basin. If you cannot make this meeting but would like to give some input on this concept, please give me a call at (406)-656-6000 or e-mail me at [chanson@m-m.net](mailto:chanson@m-m.net). The schedule for this study is a draft report by June 15, 2007, so timely comments are appreciated.

We look forward to your input on this issue.

Sincerely,

MORRISON-MAIERLE, INC.
